Web Application Development

18 October 19

<center>Written Project Description</center>

For this assignment, we will have to create an interactive story that will help the reader navigate through a story of our choosing. Before this, planning must be complete. A lucidchart will help to organize thoughts and ideas into a single chart that will show the flow of the story and different decisions that the reader can take and the different events that can occur. Also, a Google Keep list will be required to keep an updated list of what the team will be doing and checking it off as soon as the tasks are completed.

After this, we will be coding/creating the interactive story for the user. The code will be well documented and formatted, allowing for ease of reading. The code will also meet all other requirements, such as using clickable buttons for the reader, and following D.R.Y. principles. For the entire project, we will have to create a personal, daily progress journal that will show how we have to
